

jAnswers revealed - Yahoo Answers Clone Script

jAnswers Factory provides the perfect Question and Answers Solution for the Joomla CMS integrating features from the well known Yahoo Answers system.

Users can ask questions, Community provides answers. Once a question placed, this can be extended (as period) if not answered. A Ranking system for answers is also available. Users can Report offensive text, mark Favorite Questions or use the extended search through the Knowledge base.

You can test this new Extension on our DEMO Server - you can log on the Front end or Admin Back end in order to check all features and settings

jAnswers Factory brings also several charging possibilities, so that the webmaster can transform his site to a profitable business. From this features it worth mentioning the followings:

- Pay-per-Question
- Pay for featured Question
- Pay-per-Contact
- Support for "beer money" payments
- Multiple Payment Gateways including Paypal and Moneybookers
- Native SEF integration (all question links are SEF!) Other noticeable features are the extended User profile (avatar, location, yahoo id, paypal email) and Community Builder Integration.

On the back-end side, the solution brings also important features and settings to offer the needed flexibility for the site administrator. Here some of the available features: set avatar size, set time period for questions, block offensive questions/answers, manage abuse reports, manage payments, import/export questions & answers, manage extended profile, user statistics, etc.

The component comes also with a free 5.000 records database to provide a valuable start-up (due to this the downloadkit is approx. 5 MB). Bigger database packages are available upon request for an additional charge. Some of the available modules are: Latest Questions, Popular Questions, Open Questions, Random Questions, Featured Questions, Tag Cloud, etc.
